Arshal Rejith S

iamarshalrejith@gmail.com | Chennai, Tamil Nadu | LinkedIn | GitHub | Portfolio | LeetCode

Executive Summary

Computer Science and Engineering student specializing in Internet of Things with strong foundations in software engineering, data structures, algorithms, and databases. Proficient in C++, Java, Python, JavaScript, and TypeScript, with hands-on experience in full-stack, distributed, and AI-powered applications. Experienced in REST APIs, RAG systems, AI agents, databases, and concurrent programming. Targeting Software Development Engineer (SDE) roles to build scalable, reliable, and maintainable software solutions.

Technical Skills

Programming Languages: C, C++, JavaScript, TypeScript, Python, Java, Go

Frontend: HTML, CSS, Tailwind CSS, React.js, Next.js, Streamlit

Backend: Node.js, Express.js, FastAPI, REST APIs

Databases: MySQL, MongoDB, Redis, Supabase, Firebase, ChromaDB

AI/ML: NumPy, Pandas, Matplotlib, RAG, LangChain, CrewAI, Memo, Groq, Jina Embeddings

Tools & Systems: Git, GitHub, Linux, Docker, Jenkins

Professional Experience

Infosys Springboard — ML Intern *Dec 2024 – Feb 2025*

Project: StayAI — AI-Driven Guest Experience Personalization System | GitHub

- Delivered an AI-powered hospitality assistant combining RAG, LLMs, conversational memory, and AI-agent workflows for personalized guest interactions.
- Engineered context-aware retrieval using LangChain, ChromaDB, and Jina Embeddings, improving the application's ability to ground responses in relevant knowledge.
- Integrated Groq LLMs, Memo, and CrewAI to support natural-language generation, persistent memory, and multi-agent task workflows.
- Developed a FastAPI backend and Streamlit frontend, connecting conversational interfaces with the underlying AI services and retrieval pipeline.
- Implemented browser-based information retrieval and collaborated through Git/GitHub for feature integration, documentation, and project development.
- Delivered an end-to-end AI hospitality solution with a modular architecture separating frontend, backend, retrieval, memory, and AI-service layers.

Projects

WedCraft — Digital Wedding Invitation Platform *Mar 2026 – Apr 2026*

Next.js, TypeScript, Tailwind CSS, MongoDB, JWT, Google OAuth, Razorpay | Live Site | GitHub

- Built a full-stack platform for creating, customizing, sharing, and managing digital wedding invitations.
- Implemented JWT and Google OAuth authentication, including login, signup, logout, and password recovery.
- Developed invitation management with customizable templates, event details, media support, RSVP tracking, and shareable links.
- Integrated Razorpay payments, coupon functionality, tier-based features, and payment verification workflows.
- Built REST APIs and an administrative dashboard for invitations, payments, RSVPs, uploads, email services, analytics, and content management.
- Delivered an end-to-end, live production web application spanning authentication, payments, REST APIs, database operations, analytics, and content management.

GoOrbit — Peer-to-Peer Distributed File Storage System *Jun 2026 – Jul 2026*

Go, TCP, Goroutines, Channels, GOB, AES, SHA-1 | GitHub

- Built a decentralized file-storage system using Go and TCP-based peer-to-peer networking without a central server.
- Implemented peer connections, handshakes, message encoding, RPC communication, and concurrent connection handling.
- Developed content-addressable storage using SHA-1 hashing and implemented distributed file replication.
- Implemented network-wide file retrieval and AES-CTR encrypted file transfers between peer nodes.
- Used goroutines, channels, and mutexes to manage concurrent peer operations; added automated tests for core storage, transport, and cryptographic components.
- Built a distributed-storage architecture combining P2P networking, concurrency, replication, content-addressable storage, and encrypted data transfer.

Education

B.Tech. in Computer Science and Engineering (Internet of Things) *Aug 2023 – Jul 2027 (Expected)*

Shiv Nadar University, Chennai | Coursework: DSA, DBMS, Operating Systems, Machine Learning

Awards & Accomplishments

- NPTEL Elite — Programming in Java: 99%, ranked in the Top 5% of certified candidates.
- Infosys Springboard Internship 5.0 (B3): Completed AI-Driven Guest Experience Personalization System for Hospitality assignment.
- Infosys Springboard — Deep Learning for Developers: Completed certification.
